## SUMMARY OF FATAL ACCIDENTS 1959

Mr. Leonard Atess, age 62, married, no dependent children came to his death January 17, 1959, of injuries sustained on December 11, 1958, at the Old Ben Coal Corporation #22, located at Valier, Franklin County, Illinois, at 9:30 p.m. Mr. Atess was employed as a roof bolter and had 8 years experience at this mine.

This accident occurred on the second shift in the face of a 45 crosscut from the third east to the second east entry off the 13 north main east. The 45 crosscut was 14 feet wide and 9½ to 10 feet high. The roof was irregular rock and had slip formations. The place was roof bolted and the roof bolts varied from 2½ to 4 feet apart in rows of three and four. There were 25 roof bolts in a distance of 25 feet by 14 feet area.

Mr. Atess and Mr. Contri had completed the roof bolting and folded the arms on the roof bolting equipment preparing to tram out of the place when a piece of rock fell from between the second and third row of bolts from the face, striking Mr. Atess on the head. The result of this accident caused his death. The rock that fell was 24 inches long and 14 inches wide, featheredged on both ends and was five inches thick through the center across the width and weighed approximately thirty pounds.

Mr. Frank George Bruketta, age 33, divorced, one dependent child, died of a cardiac tamponade and cardiac arrest when he was accidentally caught between a coal car and the stabilizing braces of the mine cage at the Bruketta Coal Company mine tippie on January 24, 1959, at 10:30 a.m. He was employed as a hoisting engineer at the Bruketta Coal Company #1, located at Norris, Fulton County, Illinois, and had 15 years experience at this mine.

Mr. Bruketta was working alone in an unsafe manner, trying to release the automatic mine car dumping platform at the dumping point in the tippie. The deceased, who was also operating the electrical hoisting equipment, had hoisted a car of coal into the cage dump. After the coal was dumped from the car, the cage would not return to normal position for lowering into the shaft. The deceased then set the brake on the hoisting drum and proceeded to climb the tippie stairway to the dumping point of the cage. He had attached a manually operated coffering chain hoist to a horizontal beam of the tippie and the bottom of the cage platform and apparently placed tension on the hoist. Since the platform was at the dumping point, the deceased had to be operating from the horizontal tippie beam supports.

There were no eye witnesses but it appeared that the victim moved to the east side of the cage and got on the east end of the empty coal car

on the tilted platform. It would be possible at this instant, with a slight amount of slack in the hoisting cable, that the weight of his body applied to the tilted cage platform caused same to return to normal position, pinning the victim at the midsection between the cage stabilizer braces and the empty coal car.

Mr. Vechie C. Watson, age 37, married, two dependent children, came to his death by injuries received in a roof fall at the Freeman Coal Mining Corporation, Orient Mine #3, Waltonville, Jefferson County, Illinois, between the hour of 10:45 p.m. February 19, 1959, and the hour of 5:45 a.m. February 20, 1959, while at work in the mine. He had 2 years and 10 months experience at this mine.

The deceased was operating a marietta mining machine. He had finished mining all that was to be mined off the pillar and had started backing the machine out of the place when it fell in, catching the deceased under the tail where he had evidently jumped to try to protect himself. The fall was so great that it broke the tail down and crushed Mr. Watson under it.

From observation and inquiry of the face boss, operator's helper, and timberman, the standard plan of timbering had been executed and the usual plan of pillaring was being used. There was no evidence that the fall was about to occur; in fact, the face boss and operator's helper were on the left side of the machine and the timberman on the right observing and testing the condition of the place when, without warning, it started falling. They were able to retreat out along the rib to safety.

---

Mr. Willis Theodore Mason, age 52, married, no dependent children, died from crushing injuries when he accidentally fell from the brake platform to the ground and was run over by the railroad cars at the car storage yards of the United Electric Coal Company, Mine No. 9, Cuba, Fulton County, Illinois, April 7, 1959, at 1:10 p.m.

The cause of this accident was the failure to have three empty railroad cars under control. Mr. Mason, the deceased, released them from their standing position in the car storage yard to drop to the tipple for loading. Three empty cars that had previously been dropped in on the No. 2 track were standing on the track at the north side of the tipple. The second three empty cars, being brought down by him on the same track, crashed into these standing cars with such force that he apparently lost his balance and fell from the brake platform, where he was standing between the first and second cars, to the ground between the tracks in front of the cars. The last two cars, still moving and pushing the other cars forward, passed over the deceased dragging him approximately 55 feet, apparently killing him instantly.

Mr. French Jack Roberts, age 32, married, 4 dependent children, employed as a shuttle car operator, was fatally injured at the Freeman Coal Mining Corporation, Crown Mine, Farmersville, Montgomery County, Illinois, on April 16, 1959, at 12:40 p.m. while operating a shuttle car in the 45 between the second and third north while loading rock which had been shot down four days before. Mr. Roberts had 7 years experience at this mine.

The crew had just finished pulling a rail bar from beneath the rock in the second north. Mr. Roberts had run the shuttle car within 16 feet of the loading machine tail. While he was waiting for the loading machine to move to the rock to start loading, a piece of rock, 72 inches long, 24 inches thick, and 21 inches wide, fell from the rib at the roof line, which was 10 feet high at this point, crushing Mr. Roberts against the seat of the shuttle car, killing him instantly. After the rock hit Mr. Roberts, it rolled off to the side of the shuttle car.

The rib where the accident occurred was practically straight up and down. If any overhang was present, it couldn't have been over six inches.

---

Mr. Oren E. Hurtt, age 56, married, no dependent children, employed as a driller, died at about 4:45 p.m. July 28, 1959, as the result of injuries received at Mine No. 10 of the Peabody Coal Company located at Pawnee, Christian County, Illinois, while operating a dooley-twin coal drill. He had 7 years experience at this mine.

The drill became entangled when his clothing was caught by the auger of the drill while attempting to stamp the face of the coal for the next hole to be drilled.

---

Mr. Mike Mistic was killed instantly at 12:45 p.m. and Mr. Charles Bollinger seriously injured and died at 3:30 p.m. September 29, 1959, from severe left chest wounds received by a roof fall at the D and D Coal Company, located at Rushville, Schuyler County, Illinois. Mr. Mistic, age 48, married, one dependent child, was employed as a duck bill operator. He had worked at this mine 15 days. Mr. Bollinger, age 49, married, no dependent children, was employed as a cutting machine helper and had 6 years experience at this mine.

The fall occurred about 12:45 p.m. September 29, 1959, in room 2, off 3 east entry, injuring Charles Bollinger, James Pears and killing Mike Mistic. Mr. Bollinger was seriously injured and taken to the Rushville Hospital where he died about 3:30 p.m. the same day.

The roof fall measured about 16 feet wide, 30 feet long and about 14 inches in thickness; it broke into several pieces when it fell. Several slickenside slips and boulders were evident in the fallen material. The fall was featheredged on the left rib across the face and at the start of the fall and broke off on the right rib about 14 inches thick. There were six permanent props and two safety props that were ridden out with the fall indicating the place had been well-timbered for past roof

conditions at this mine. The room was rock top from the mouth to the face and after the fall it was still rock top which indicated it would be rock top in advance of the face. This was a very unusual condition at this mine as they have had very few falls of any kind.

Mr. Otis C. Woolbright, age 24, married, two dependent children, was fatally injured while operating a bulldozer at the Peabody Coal Company, River King Mine, located at Freeburg, St. Clair County, Illinois, when he was struck on the side of his head and body by a large piece of falling rock causing fractures of the right arm and hip, injury to the head and concussion of the brain. The accident occurred November 3, 1959, at 12:47 a.m. and Mr. Woolbright died at St. Elizabeth's Hospital, Belleville, Illinois, at 2:25 a.m. the same day. He had 2 years and 3 months experience at this mine.

Mr. Woolbright, while operating a blade bulldozer in conjunction with a stripping shovel, was struck on the side of the head and his right side by a piece of limestone some 24" x 18" x 16" in size which either fell from the highwall formation some 50 feet above the coal or from the shovel. In falling, the rock hit a limestone ledge, some 12 feet above the coal causing the rock to be thrown in direct line with the bulldozer and into the driver's seat, striking the driver on the right side of the body and head and continued across the bulldozer and onto the ground on the opposite side of the bulldozer.

The seat of ordinary type provided on bulldozers is below arm pits and provides little, if any, protection to this type of accident.

Mr. Thomas Dublo, age 46, married, no dependent children, came to his death on December 28, 1959, from being crushed under a fall of rib coal while working at the Old Ben Coal Corporation #14, located at Buckner, Franklin County, Illinois. Mr. Dublo was injured at 9:00 p.m. from which injuries he died about 10:30 p.m. at the Franklin Hospital, Benton, Illinois. He was employed as a timberman and had 15 years experience at this mine.

A crosscut had been cut through between room 6 and room 7, 12 north, 32 west, 15 northeast. The loading machine moved in and loaded one buggy, then was backing the machine from the right hand side to reset in the center of the face. The deceased, acting as helper, was taking care of the cable about 12 feet away from the machine along the right rib which had an average of about 15" overhang when a fall of rib coal about 15 feet long and weighing about 1200 pounds fell, injuring the deceased.

The face boss and the operator said they had just examined the roof and rib before moving to the crosscut and did not find any condition that was unsafe. It looked as if when the loading machine loaded out the right hand side of the crosscut, it loosened the rib which had about 15 inches of overhang, causing it to fall while the machine was backing out.

## ANALYTICAL LABORATORY

The Analytical Laboratory of the Department of Mines and Minerals is located at 413 East Main Street, West Frankfort, Illinois. The Laboratory was established in January of 1948, and temporarily located on the University of Illinois campus. In June 1952 the Laboratory was moved to more permanent quarters in Springfield, Illinois, where it remained until destroyed by fire December 10, 1953.

In May 1954 the Laboratory was moved to West Frankfort, Illinois. The establishment of the Laboratory at West Frankfort, Illinois was a geographical move which enabled the Laboratory to give quicker service to State Mine Inspectors and Mine Operators. The West Frankfort area is the center of the largest coal producing field in the State of Illinois.

In establishing the Laboratory in January 1948, Illinois became the first State to operate a Laboratory of this type, in connection with its mining department. At the time of the establishment, a study of the Federal Bureau of Mines Laboratory was made and the Department Laboratory adopted methods of analyses and equipment similar to that used by the Federal Bureau of Mines.

The purpose of the Laboratory is to analyze for explosive, noxious and gaseous mixtures in the mining industry. The Laboratory also analyzes mine dust for the determination of the percentages of combustible and incombustible material; thus, aiding the mining industry in the control of flame propagating characteristics of mine dust. Samples of gaseous mixtures may be analyzed and the results reported to the State Mine Inspector within one hour after the samples have been delivered to the Laboratory. In time of emergency, such as mine fires or the sealing of fire areas, the resulting analyses aid inspectors and management in determining procedure to be followed in eliminating the emergency.

During the year 1959 there were 2,765 mine atmosphere samples analyzed, and 3,304 coal dust samples were analyzed.

---

The Laboratory Personnel consists of ten employees:

George W. Sneddon, Supervisor, 411 North Horn, West Frankfort, Ill.  
John N. Mitchell, Lab. Technician II, Route 2, West Frankfort, Ill.  
Earl Brookshire, Lab. Technician II, 222 Dobson Street, Cartersville, Ill.  
Zudora Hadfield, Lab. Technician II, 603 Future Drive, Marion, Ill.  
Bernice Smothers, Lab. Technician II, Route 1, West Frankfort, Ill.  
Eulah Rogers, Clerk-Steno II, 803 East Browning, Marion, Ill.  
Priscilla Nicholson, Clerk-Typist I, 1216 East Oak, West Frankfort, Ill.  
Elsworth Shepherd, Lab. Helper, Route 2, Thompsonville, Ill.  
Arno Stiritz, Lab. Helper, 410 West Tenth, Johnston City, Ill.  
Jesse Garrett, Lab. Helper, Route 2, West Frankfort, Ill.

## REPORT ON COAL MINE FIRE AT THE MOFFAT COAL COMPANY, MURDOCK, ILLINOIS, AUGUST 31, 1959:

By: State Coal Mine Inspectors Albert Morris and  
John J. Kotzman

On August 31, 1959, 12:10 P.M., the clerk at the above mine called me by telephone at my home in Taylorville, Illinois, to report a fire in the mine and that they would need the state mine rescue teams. Immediately I called the Department of Mines and Minerals' office, Springfield, Illinois, to report the fire. I also called the State Mine Rescue Station, Springfield, giving Superintendent James Litchfield the information on the fire and the need for the mine rescue teams.

I then picked up State Inspector John Kotzman and two members of the mine rescue teams and proceeded to the mine, arriving there approximately 3:00 P.M. Director Schull arrived at the mine shortly thereafter via plane from Springfield. We then held a conference and plans were made to extinguish the fire. By this time the mine rescue truck with the other members of the mine rescue teams and also Mr. William J. Williams, Supervisor of Mine Rescue Station Superintendents, had arrived.

At 4:00 P.M., August 31, 1959, Inspector Kotzman, the two mine rescue teams, Mine Superintendent Elmos Williams, several other company officials, and I went underground. Upon arriving at the 13 south we found the company officials had practically cut off all ventilation from the fire area by erecting curtain brattices.

After a conference, it was decided to approach the fire from the intake side taking the air with us. The smoke was so dense nothing could be done until we cleared the smoke. We started in No. 4 crosscut at Room 5—13 south approximately 600 feet from the fire and started pushing the smoke ahead of us putting up canvas curtains across the crosscuts and rooms as we advanced. We used a canvas curtain the width of the crosscut to push the smoke ahead of us. After advancing about two crosscut lengths, the smoke started to back up and also come from behind the curtains that were behind us, making it impossible to advance any further. This indicated there was a block some where in advance.

We stopped, held a conference, knowing we had a block ahead of us we decided to send one of the rescue teams ahead to explore and find the block. They found a canvas brattice across No. 4 crosscut and took it down and retreated to the fresh air base. We again started to push the smoke ahead of us, putting up curtains as before until we reached the belt entry which is the 13 south and again we stopped. It was decided to go down Room #1 instead of the belt entry. We then proceeded down Room #1 pushing the smoke ahead of us and putting up canvas curtains in the crosscuts on both sides of Room #1. While the rescue teams were putting up the curtains, the fresh air men

were doubling up the curtains and making them as air-tight as possible, also the water line was brought up at the same time. We went down Room #1 until we were past No. 6 crosscut and put a canvas curtain across Room #1 and a line curtain in No. 6 crosscut to the belt entry where we had found our first fire. This was at about 10:00 P.M., August 31, 1959. We sent word to turn the water on and the rescue teams started to use the C.O.<sup>2</sup> fire extinguishers, also several 100 lb. C.O.<sup>2</sup> fire extinguishers were used on the fire. This did not prove to be very effective. By this time the water supply was available, but it proved to be just a trickle at the end of the hose. Men were sent back to locate the cause of the trouble. A broken pipe line was discovered. The line was repaired and the water turned on again with the same results, just a trickle of water. Again men were sent to find the trouble. It was found that one of the booster pumps was not operating. This was corrected and the pump was put into operation after which we had a good supply of water. About two hours were lost during this time.

By this time supplies of rock dust were arriving at the scene. Water and rockdust were used to combat the fire in No. 6 crosscut and along the belt. We then proceeded down the belt entry putting out the fire in No. 6 crosscut and along the belt. Then we proceeded down the belt entry putting out the fires along the way until we came to No. 7 crosscut. There were fires in No. 7 crosscut on both ribs, the roof was falling, and the smoke was very dense. We took our ventilation in the crosscut and advanced toward Room #1. After we had smothered the fires in No. 7 crosscut, we backed out to the belt entry, bratticed off the No. 7 crosscut and started down the belt entry towards the end of the belt where the fire originated.

At this point the work appeared to slow down due to the terrific heat, dense smoke, bad top and low clearance due to the roof falls and the elevating conveyor and shuttle car. We were using props 16 inches to 20 inches long which gives an idea of the clearance present.

The fire again broke out in No. 7 crosscut. The smoke started to back out of the crosscut and come down the belt entry where we were working on the fire at the end of the belt. The smoke became so dense we were forced to move back. After this happened several times, we decided to go back into No. 7 crosscut from the belt entry side and put out the fires along the right and left ribs. We then put the fires out and went back down the belt entry to the tail of the belt. After some time the smoke again forced us out of the belt entry. The fire broke out again in No. 7 crosscut near No. 1 room.

We then decided to go down Room #1 and put out the fires in No. 7 crosscut. We took the air down Room #1 and found several blazing fires in No. 7 crosscut at Room #1. These were extinguished with water and rockdust. About this time, the fire along the right rib in No. 7 crosscut started to break out again. This time just off the belt entry pushing the smoke down into Room #1. It was then decided

to go back again into the belt entry. We took the air back into the belt entry down No. 7 crosscut and began to apply water and rockdust again coming through No. 7 crosscut into Room #1, then down Room #1 to No. 8 crosscut, through No. 8 crosscut to the tail of the belt.

We started to fight the fire from the inby end of the fire. We were doing this while the roof falls in the belt entry were cleaned up and retimbered so we could get back into the belt entry and smother the fire from the outby end. The last 50 feet or so practically everyone was lying on their stomach due to the low clearance and the fact we were directly above the elevating conveyor and shuttle car.

At 3:00 P.M. Wednesday, September 2, 1959, we decided the fire was smothered. The mine rescue teams reached the surface at 4:00 P.M. September 2, 1959. Approximately 240 tons of rockdust was used and the water was estimated to be flowing at the rate of 2,000 gallons per hour. During the fire Mr. George Stachura, Mr. Coy South, as well as other company officials, Federal Mine Inspectors Perz, Douglas, and McCuen were present.

Thursday morning, September 3, 1959, we made an inspection of the mine accompanied by Federal Inspectors Perz, Douglas, McCuen, and Mr. George Stachura, Vice-President in Charge of Operations. After our inspection due to the fact that .02 percent of C.O. was present in the return, we posted a notice that all mining operations be suspended until the normal ventilation was restored and another inspection made. Saturday, September 5, 1959, Inspector Morris made an inspection of the mine accompanied by Federal Mine Inspectors Whittaker, Douglas, McCuen, and Mr. George Stachura, Coy South and Elmos Williams officials of the company. After the inspection notice was posted that mining operations may be resumed. However, the fire area must be patrolled until such time as the State Department of Mines and Minerals is satisfied that all possibility of the fire rekindling is assured. Two air samples were collected and the analyses showed no trace of C.O.

The fire was caused by a short circuit in a trailing cable of a shuttle car. The shuttle car operator was approaching the tail of the belt when a short circuit occurred in the trailing cable. He emptied the contents of a small Pyrenne Fire Extinguisher on the fire and thought he had put the fire out. He went to get the other shuttle car operator to pull him away from the tail of the belt. When they came back to the shuttle car, it was ablaze and the smoke was so dense they could not get close to the fire. The fire started about 11:00 A.M., August 31, 1959, at the tail of the belt in the 13 south between No. 7 and 8 crosscut. A small fire extinguisher and two bags of rockdust were carried on the shuttle car.

It is not our intention to place blame on any individual or group for the fire or its control; however, certain observations are made in the hope that future fires may be prevented if possible.

1. Prompt action should be taken to quickly and completely extinguish any fire that may occur. The first minutes at any fire are the most important, especially in a coal mine.
2. Be certain that a fire is fully extinguished and no danger of rekindling is present before leaving it unattended.

The management fully concurs in the foregoing recommendations and states that at their safety meetings which are held periodically, fire-fighting and fire prevention measures will be stressed. In the future water lines will be extended and so maintained to the tail of the belt in all sections.

## MINE RESCUE STATION ACTIVITIES

1959

On August 23, 1959, at 6:45 p.m., the Truax-Traer Coal Company, located at Elkhaville, Jackson County, Illinois, called the DuQuoin Mine Rescue Team to check on water that had broken through a drill hole. The rescue team arrived at the mine at 7:23 p.m. but did not go below and they were back to their respective station at approximately 9:30 p.m.

On August 31, 1959, about 12:30 p.m., the Springfield Mine Rescue Station was called by Mr. Roy Bauers, Chief Clerk of the Moffat Coal Company at Murdock, Illinois, and requested the service of the Mine Rescue Team to come and assist in putting out a mine fire. The mine rescue team members were notified immediately to proceed to the mine and the mobile unit, with the necessary equipment, was on its way at approximately 1:15 p.m. When the team reached the mine, they were informed that an electrical driven rubber-tired shuttle car loaded with coal had caught fire about 11:00 a.m. in the 13th south room panel entry off No. 1 main east at the loading head and was still burning. The rescue team went below immediately and with the assistance of the mine management, state mine inspectors and mine employees, the fire was brought under control and smothered out with rock dust at approximately 5:00 p.m. on September 2, 1959.

## DIVISION OF OIL AND GAS

The Division of Oil and Gas of the Department of Mines and Minerals is required to enforce the provisions of "An Act in Relation of Oil, Gas, Coal and Other Surface and Underground Resources," and the Rules and Regulations formulated pursuant to the provisions of the Act.

It is the duty of the Division to see that oil wells are properly spaced; to control the drilling and plugging of oil wells and wells drilled in connection therewith; to see that necessary precautions are observed to protect the workable coal seams through which wells are drilled and to prevent pollution of land and fresh water supplies resulting from oil field operations.

Permits must be obtained from the Division of Oil and Gas before wells are drilled for oil, gas, watersupply, water input, gas input, air input, salt water disposal, and structure test. In 1959, 3,800 such permits were issued. The Law requires that for each well drilled or acquired, the operator must furnish the Division with bond coverage to guarantee the eventual plugging of the well and the satisfactory restoration of the well site. The State oil well inspectors are in attendance to supervise the plugging of all abandoned drill holes, which in 1959 numbered 1,866.

The Division furnishes copies of permits and plugging affidavits to the State Geological Survey, and is charged with the responsibility to seeing that well logs and cuttings are sent to the Survey. The Division also receives and records completion data on wells drilled.

The Rules and Regulations of the Division provide for the calling of public hearings, upon written request of any interested person, for the purpose of taking action with regard to any matter within the jurisdiction of the Department. All such hearings are made of record in the Division and are open to public inspection.

The Oil and Gas Board consists of four members and the Director of the Department, and is subject to call by the Mining Board for advice and consultation on matters pertaining to the oil and gas industry.

the Northeast corner of the Northeast quarter of }  
the Southeast quarter of Section 22, Township 4 }  
South, Range 2 East, Jefferson County, Illinois. }

This cause came on for hearing on the 12th day of March, A.D. 1959 before the State Mining Board in the State Office Building, Springfield, Illinois pursuant to notice of hearing, duly given on the application above-captioned.

Present at the hearing for the State Mining Board were Mr. S. F. Peterson, Acting Hearing Officer, Mr. George Lane, Petroleum Engineer; for the Permittee, Mr. W. M. Hisep; the Objector, Mr. J. Peramo and Counsel.

The Mining Board, after consideration of the exhibits and testimony presented by the Permittee, took the cause under advisement. Now on this 24th day of March, 1959, this matter came on for further consideration before the Mining Board, in conference, and the Mining Board being fully advised on the premises finds as follows:

That the testimony and exhibits submitted at the hearing revealed a diversity of opinion as to the existence of workable coal in the Number 6 vein the area surrounding the proximity of the proposed well to be drilled.

Since this area is an inactive mining area, the State Mining Board is approving the issuance of the permit to drill the well subject to the specifications as set forth in the letter accompanying the permit requiring that a mine string be set to protect the coal seam and due notice be given to the representative of the Inland Steel Company and the State oil well inspector to supervise this protective work. Furthermore, the mining board finds that the application for a permit to drill the Jefferson Oil and Gas Corporation #1 located:

330 feet South, 330 feet West of the Northeast corner  
of the Northeast quarter of the Southeast quarter of  
Section 22 4S 2E, Jefferson County, Illinois

filed by Roy Powers to the Salem Formation is in order.

*It is therefore ordered*, that a permit shall be granted to Mr. Roy Powers for the Jefferson Oil and Gas Corporation #1 well.

Dated at Springfield, Sangamon County, Illinois this 24th day of March, A.D. 1959.

In the matter of an application of the Estate of H. H. Weinert to establish drilling units and designate the location for drilling of wells to be drilled in the North Aden Pool located in Townships 2 and 3 South, Range 7 East, Wayne County, Illinois. } ORDER No. 106

This cause came on for hearing before the State Mining Board in the State Office Building, Springfield, Illinois at 10 A.M. D.S.T., on Wednesday the 26th day of August, A.D. 1959.

Present at the hearing for the State Mining Board were Mr. S. Everett Wilson, Hearing Officer, Mr. S. F. Peterson, Oil Conservation Supervisor, and Mr. George R. Lane, Petroleum Engineer. Interested parties appeared before the representatives of the Mining Board and announced they were ready for the hearing; the witnesses were duly sworn, and evidence in the form of oral testimony and exhibits was heard by the Mining Board.

The Mining Board, after consideration of the exhibits and testimony by the Applicant, took the case under advisement. Now, on the third day of September, 1959, this matter came on for further consideration before the Mining Board, in conference, and the board being fully advised on the premises finds as follows:

That is is necessary and will result in the most efficient and economical development of the pool as a whole by specifying the drilling units and the location upon such drilling unit where future wells may be drilled on the lands included in the North Aden Pool, when such well is to be drilled to more than 4,000 feet beneath the surface and it is the opinion that drilling units consisting of 40 acres should be established, same to be quarter-quarter sections and that the well be located in the center of such 40-acre tract. This field-wide spacing program should prevent waste, and it will protect and enforce the correlative rights of lease owners and property owners in the pool and prevent the drilling of unnecessary wells, pursuant to Section 21.1(C) of an Act in Relation to Oil, Gas, Coal and Other Surface and Underground Resources and Rules and Regulations.

*It is therefore ordered*, that drilling units of 40-acres lying within the governmental surveyed quarter-quarter section of land, with the well to be located in the center of each unit, be hereby established for all wells drilled in the North Aden Pool at a depth of more than 4,000 feet below the surface. The North Aden Pool is defined to be:

- (a) All of Section 28, Township 2 South, Range 7 East, Wayne County, Illinois.
- (b) The South-half of Section 29, Township 2 South, Range 7 East, Wayne County, Illinois.
- (c) All of Section 32, Township 2 South, Range 7 East, Wayne County, Illinois.
- (d) All of Section 33, Township 2 South, Range 7 East, Wayne County, Illinois.
- (e) All of fractional Section 4, Township 3 South, Range 7 East, Wayne County, Illinois.

(f) All of fractional Section 5, Township 3 South, Range 7 East. An exception to this order is hereby made with regard to wells drilled prior to the date of the issuance of this order.

*It is further ordered*, that if the Mining Board finds, after notice and hearing, that surface conditions would substantially add to the burden or hazard of drilling such well at the specified location, or for some other reason it would be inequitable and unreasonable to require a well to be drilled at the specified location, the Mining Board may issue an order for the well to be drilled at a location other than the specified drilling units.

Dated at Springfield, Sangamon County, Illinois this third day of September, 1959.
